CORE COMPETENCIES		
Arabic, English & German MS Office, AutoCAD, Solid Works, MatLab, Ansys	MEP Design Plumbing Systems Commissioning	HVAC Systems Fire Protection Systems Construction Management
WORK EXPERIENCE		

MEP Assistant Manager, Havelock-one Interior, Saudi Arabia

March 2024 – Present

Kingdom Tower Mall – Riyadh, Saudi Arabia renovation project, a high-profile and technically demanding project in Riyadh. The mall remains fully operational during the day, and all renovation works are carried out during night shifts, requiring careful planning, coordination, and strict adherence to safety and quality standards.

Key Responsibilities:

- Managing the renovation and upgrade of MEP systems, including HVAC systems and units, firefighting, fire alarm, and lighting systems across the mall.
- Overseeing fit-out work in multiple areas, ensuring seamless integration with new MEP services.
- Managing the construction of a new decorative water feature inside the mall, in coordination with a specialist subcontractor.
- Coordinating all work in a live retail environment, ensuring zero disruption to daytime operations.
- Leading and supervising our subcontractors and site teams during night shifts, with strict focus on time management and quality.
- Review shop drawings, materials, and method statements to ensure everything meets project specs.
- Attending all technical, commercial, client, and progress meetings to align execution with design intent and project goals.
- Managing procurement and supplier negotiations to support timely and cost-effective delivery of MEP components.
- Developed a new full BOQ (Bill of Quantities) for the MEP scope, aligning with the site conditions, design updates, and client requirements.

This project requires a high level of adaptability, problem-solving, and teamwork due to its night-only execution and the complexities of working within an active, premium commercial space.

Beyond the technical side, I’m also actively involved in the commercial aspects of the job. I support cost estimation, manage material procurement, and negotiate with suppliers and subcontractors to make sure we’re getting the best value without compromising on quality.

This role has helped me strengthen both my technical and commercial skills, especially in fast-paced interior, renovation and new projects. I enjoy being the link between the technical details on site and the bigger picture of delivering a successful project.

- Managed a team of 3 engineers while working on 2 projects, namely VIA RIYADH and LO1.
- Executed VIA RIYADH, a 5-star hotel with 100 rooms, 15 restaurants, 23 retail shops, a cinema, and various other amenities.
- Designed HVAC systems, including exhaust systems, chilled water systems, chillers, central AC and heating systems, refrigerant and split units, and heating water systems.
- Engineered plumbing systems, encompassing domestic cold and hot water supply systems, domestic drainage for waste and soil systems, vent systems, storm drainage water systems, and domestic water pump rooms.
- Implemented fire protection systems, including NOVEC systems, foam systems, evacuation plans, exhaust fans, make-up air fans, and the firefighting pump room.
- Designed the fuel system to manage main tank supply and refill alerts for sub tanks.
- Contributed to the design of utility buildings.
- Conducted testing and commissioning after construction, including water supply balancing and functional testing, chilled water equipment balancing, and air balancing.
- Performed testing on AHU and FCU systems.
- Managed mechanical procurement, ensuring the acquisition of equipment, materials, and systems that complied with project quality and specification requirements.

Technical Engineer, Enjaz United for Machinery and Equipment, Saudi Arabia Jan 2021 – Jul 2021

- Conducted pump selection according to project specifications and generated quotations.
- Demonstrated expertise in pump application and design, showcasing in-depth product knowledge.
- Executed CAD modeling and drawing practices, including the utilization of Geometric Dimensioning and Tolerancing (GD&T) standards.
- Conducted hydraulic calculations for pump selection, ensuring efficient project execution.

Mechanical Engineer Intern, Middle East Airlines, Lebanon

July 2019

- Conducted observations and analysis of the hydraulic systems within aircraft.
- Acquired knowledge of aircraft components, their visual identification, and their functional roles.
- Gained valuable insights by observing the maintenance and repair procedures for aircraft engines.

Technician, Rymco, Lebanon

Jul 2018 – Sep 2018

- Performed post-sale automotive services, including routine maintenance tasks such as oil changes, brake inspections, and filter replacements, primarily for GMC vehicles.
- Diagnosed and resolved complex technical issues for clients, including engine repair, to ensure the efficient and effective resolution of automotive problems.

EDUCATION

Master of Science, Mechanical Engineering, Lebanese International University, Lebanon 2020

- **GPA: 3.4/4**
- **Graduation Project: Waste Tires to Energy**
 - Developed eco-friendly waste tire solution in Lebanon using pyrolysis, producing compliant diesel, steel, carbon black, and other valuable products, mitigating environmental threats and promoting safety.
 - Advocated environmental responsibility amidst high car ownership, aligning with local regulations (ASTM D975), emphasizing shared commitment of government and citizens to protect public health and the environment.

- My thesis got Approved by The Institute of Electrical and Electronics Engineers (IEEE) and was published on their website.

Bachelor of Science, Mechanical Engineering, Lebanese International University, Lebanon **2018**
